

## Overview

KEMET's PEG124 is an electrolytic capacitor with very long-life and outstanding electrical performance. The device has a polarized all-welded design, tinned copper wire leads, a negative pole connected to the case, and plastic insulation. Long-life and very high reliability are achieved by dimensioning of the capacitor, careful selection of materials/methods, and discipline in quality control allowing operation up to +125°C/+105°C.

The PEG124 winding is housed in a cylindrical aluminum can, with a high purity aluminum lid and high quality rubber gasket. The sealing system is designed for electrolyte leakage-free operation and a very low gas-diffusion rate of electrolyte. The low ESR is the result of a low resistive electrolyte/paper system and an all-welded design.

## Applications

KEMET's PEG124 is a high performance axial electrolytic capacitor. Typical applications include smoothing, coupling/decoupling and energy storage in telecommunication, power supply system, data processing, process control and measuring, where long life and high reliability are of paramount importance.

## Benefits

- Operating temperature of +125°C and +105°C
- Very long life, up to 27,500 hours at +105°C
- Low ESR
- Low ESL
- Polarized all-welded design
- Outstanding electrical performance

## Part Number System

## Performance Characteristics

| Item                          | Performance Characteristics  |   |
|-------------------------------|--|---|
| Capacitance Range             | 1 – 4,700 $\mu\text{F}$  | 1 – 470 $\mu\text{F}$   |
| Rated Voltage                 | 10 – 63 VDC  | 100 – 450 VDC   |
| Operating Temperature         | -40 to +125°C  | -40 to +105°C   |
| Capacitance Tolerance         | -10/+30%, (-10/+50%, $\pm 20\%$ select values) at 100 Hz/+20°C   |   |
| Operational Lifetime          | 27,500 hours at +105°C (hours, D = 20 mm)  |   |
| Shelf Life                    | 5,000 hours at +105°C or 10 years at +40°C 0 VDC +40°C 10 years 0 VDC  |   |
| Leakage Current               | $I = 0.01 \text{ CV} (\mu\text{A}, \text{CV} \leq 1,000)$<br>$I = 0.003 \text{ CV} + 4.0 (\mu\text{A}, \text{CV} > 1,000)$                           | $I = 0.006 \text{ CV} + 4.0 (\mu\text{A})$  |
|                               | C = rated capacitance ( $\mu\text{F}$ ), V = rated voltage (VDC). Voltage applied for 5 minutes at +20°C.  |   |
|                               | Procedure  | Requirements  |
| Vibration Test Specifications | 0.75 mm displacement amplitude or 10 g maximum acceleration. Vibration applied for three 2-hour sessions at 10 – 500 Hz (capacitor clamped by body). | No leakage of electrolyte or other visible damage. Deviations in capacitance from initial measurements must not exceed:<br>$\Delta C/C < 5\%$ |
| Standards                     | IEC 60384–4 long life grade 40/125/56  | IEC 60384–4 long life grade 40/105/56   |

## Compensation Factor of Ripple Current (RC) vs. Frequency

|             |        |       |       |         |
|-------------|--------|-------|-------|---------|
| Frequency   | 300 Hz | 1 kHz | 5 kHz | 100 kHz |
| Coefficient | 0.57   | 0.80  | 1.00  | 1.04    |

## Test Method & Performance

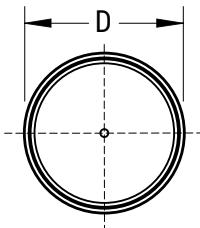

| Endurance Life Test          |  |                                 |
|------------------------------|--|---------------------------------|
| Conditions                   | Performance  |                                 |
| Temperature                  | +125°C   | +105°C ( $\geq 100 \text{ V}$ ) |
| Test Duration                | 2,000 hours  | 5,000 hours                     |
| Ripple Current               | Maximum ripple current specified in table  |                                 |
| Voltage                      | The sum of DC voltage and the peak AC voltage must not exceed the rated voltage of the capacitor |                                 |
| Performance                  | The following specifications will be satisfied when the capacitor is tested at +20°C:            |                                 |
| Capacitance Change           | < 160 V  | Within 15% of the initial value |
|                              | $\geq 160 \text{ V}$   | Within 10% of the initial value |
| Equivalent Series Resistance | Does not exceed 200% of the initial value  |                                 |
| Leakage Current              | Does not exceed leakage current limit  |                                 |

## Ordering Options Table

Note: L1 is KEMET's recommendation for minimum distance between symmetrical lead bend. Available only for customer specific part numbers. Lead bend dimensions must be specified and confirmed per article.

## Shelf Life

The capacitance, ESR and impedance of a capacitor will not change significantly after extended storage periods, however the leakage current will very slowly increase. KEMET products are particularly stable and allow a shelf life in excess of ten years at 40°C. See sectional specification under each product series for specific data.

## Failure Rate

Estimated field failure rate: ≤ 1.0 ppm (failures per year/produced number of capacitors per year).  
The expected failure rate for this capacitor range is based on field experience for capacitors with structural similarity.

## Environmental Compliance

All Part Numbers in this datasheet are Reach and RoHS compliant and Halogen-Free.

As an environmentally conscious company, KEMET is working continuously with improvements concerning the environmental effects of both our capacitors and their production.

In Europe (RoHS Directive) and in some other geographical areas such as China, legislation has been put in place to prevent the use of some hazardous materials, such as lead (Pb), in electronic equipment. All products in this catalog are produced to help our customers' obligations to guarantee their products and fulfill these legislative requirements. The only material of concern in our products has been lead (Pb), which has been removed from all designs to fulfill the requirement of containing less than 0.1% of lead in any homogeneous material. KEMET will closely follow any changes in legislation worldwide and make any necessary changes in its products, whenever needed.

Some customer segments such as medical, military and automotive electronics may still require the use of lead in electrode coatings. To clarify the situation and distinguish products from each other, a special symbol is used on the packaging labels for RoHS compatible capacitors.

Due to customer requirements, there may appear additional markings such as lead-free (LF), or lead-free wires (LFW) on the label.

## Operational Life PEG124 (+125°C)

Operational life ( $L_{op}$ ) at ambient temperature  $T_a$  and ripple current  $I_{AC}$ .

### Diagram valid for 20 mm case size.

Operational life,

16 mm case size:  $0.67 \times$  diagram value

13 mm case size:  $0.44 \times$  diagram value

10 mm case size:  $0.37 \times$  diagram value

Example:

Article: PEG124MG368AQ (16 x 37 mm)

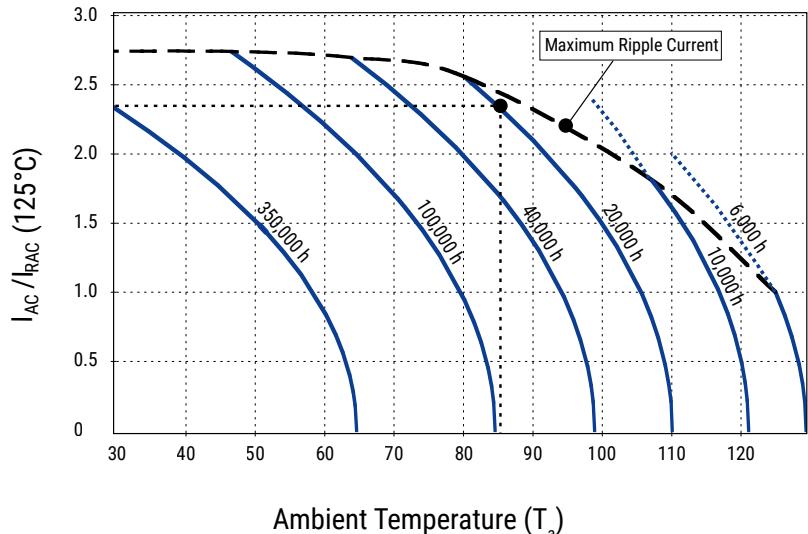

Ambient temperature ( $T_a$ ): +85°C

Ripple current at 10 kHz ( $I_{AC}$ ): 6.0 A

$$I_{RAC} (+125^\circ\text{C} \geq 5 \text{ kHz}) = 2.6 \text{ A} \text{ (from data table)}$$

$$\rightarrow I_{AC}/I_{RAC} (+125^\circ\text{C}) = 2.3$$

Operational life: interpolation between the  
 $L_{op}$ -curves  $\rightarrow L_{op} \sim 20 \text{ kh} \times 0.67 = 13 \text{ kh}$  (blue curves)

## Operational Life PEG124 (+105°C)

Operational life ( $L_{op}$ ) at ambient temperature  $T_a$  and ripple current  $I_{AC}$ .

### Diagram valid for 20 mm case size.

Operational life,

16 mm case size:  $0.67 \times$  diagram value

13 mm case size:  $0.44 \times$  diagram value

10 mm case size:  $0.37 \times$  diagram value

Example:

Article: PEG124RL3150Q (20 x 46 mm)

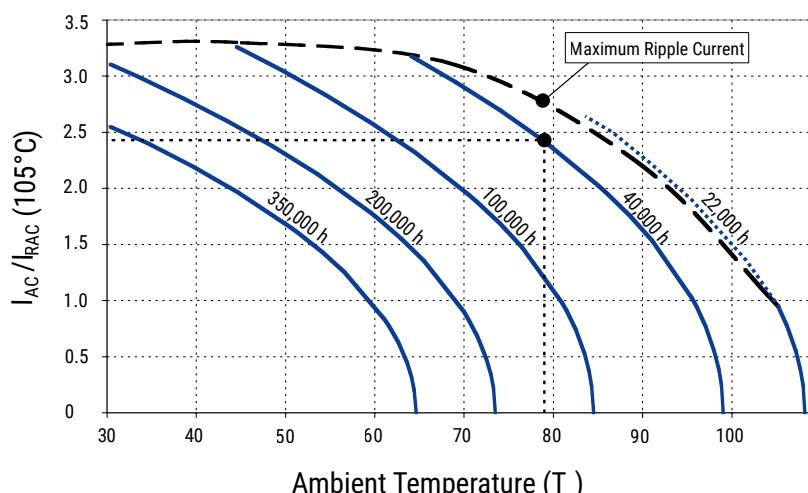

Ambient temperature ( $T_a$ ): +79°C

Ripple current, at 10 kHz ( $I_{AC}$ ): 2.7 A

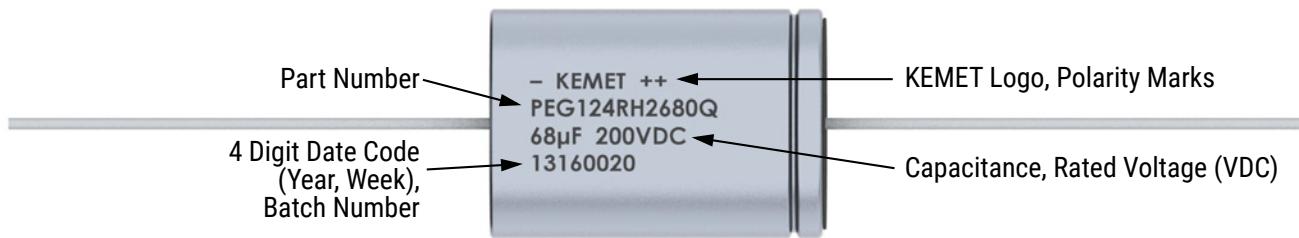

$$I_{RAC} (105^\circ\text{C} \geq 5 \text{ kHz}) = 1.10 \text{ A} \text{ (from data table)}$$

$$\rightarrow I_{AC}/I_{RAC} (+105^\circ\text{C}) = 2.45$$

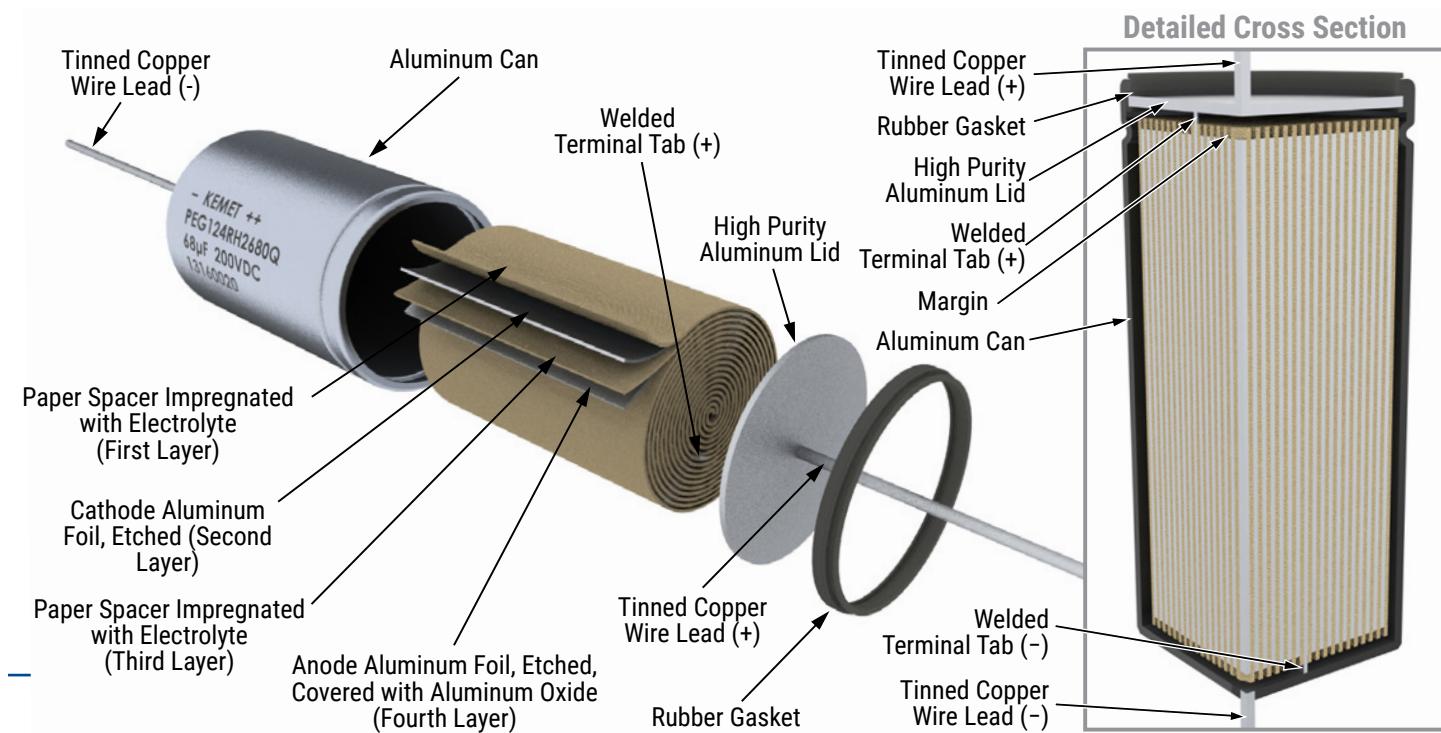

Operational life: interpolation between the  
 $L_{op}$ -curves  $\rightarrow L_{op} \sim 40 \text{ kh}$  (blue curves)

## Marking

## Construction

## Construction Data

The manufacturing process begins with the anode foil being electrochemically etched to increase the surface area and then “formed” to produce the aluminum oxide layer. Both the anode and cathode foils are then interleaved with absorbent paper and wound into a cylinder. During the winding process, aluminum tabs are attached to each foil to provide the electrical contact.

The winding is assembled to the capacitor Al-can and to the Al-lid. The can is filled with electrolyte and the winding is impregnated during a vacuum treatment. The capacitor is sealed. Throughout the process, all materials inside the housing must be maintained at the highest purity and be compatible with the electrolyte.

Each capacitor is aged and tested before being packed. The purpose of aging is to repair any damage in the oxide layer and thus reduce the leakage current to a very low level. Aging is carried out at elevated temperature and is accomplished by applying voltage to the device while carefully controlling the supply current. The process takes between 2 and 20 hours, depending on voltage rating.

Damage to the oxide layer can occur due to a variety of reasons:

- Slitting of the anode foil after forming
- Attaching the tabs to the anode foil
- Minor mechanical damage caused during winding

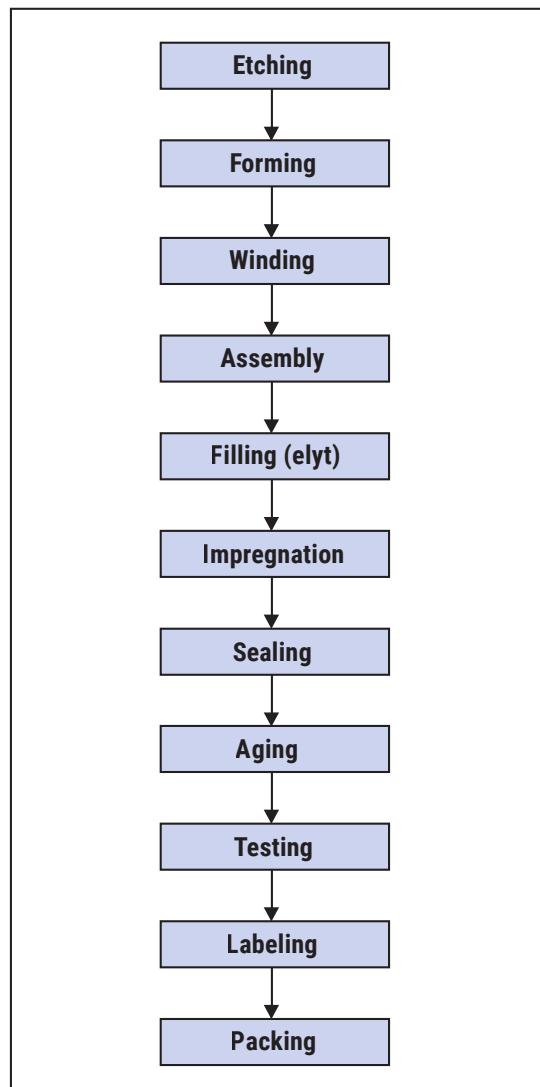

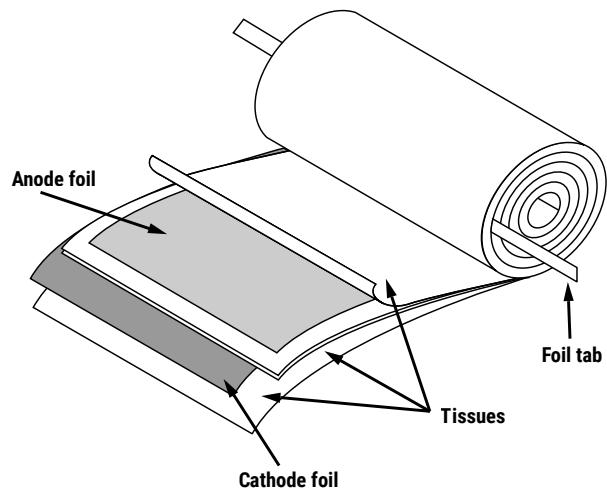

The following tests are applied for each individual capacitor.

### Electrical:

- Leakage current
- Capacitance
- ESR
- Tan Delta

### Mechanical/Visual:

- Pull strength test of wire terminals
- Print detail
- Box labels
- Packaging, including packed quantity

### Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
